

Pittsfield School District

HIV / AIDS

Human Immunodeficiency Virus (HIV) progressively destroys the body's ability to fight infections and certain cancers. The term acquired immunodeficiency syndrome (AIDS) is used to mean the later stages of an HIV infection. To assist the District and infected persons, the District adopts the following policy.

General Principles:

- A. HIV is not spread by casual, everyday contact. Therefore, absent a serious secondary infection that may be transmitted to others or a significant health problem that restricts the infected person's ability to attend school, a student who is infected with HIV or AIDS shall attend the school and classroom to which he/she would be assigned, and shall receive the rights, privileges, and services to which he/she would be entitled if not infected, free of physical and verbal harassment.
- B. There shall be no discrimination in employment against a person infected with HIV or AIDS based solely upon said infection. No district employee shall be terminated, non-renewed, demoted, suspended, transferred, or subjected to adverse action based solely upon his/her infection with HIV or AIDS, or the perception that he or she is so infected. However, the district may take whatever action is appropriate as to an employee who, despite reasonable accommodation, is unable to perform his/her duties due to an illness, including an illness related to HIV or AIDS.
- C. The district shall provide a sanitary environment and shall establish procedures for handling bodily fluids.
- D. The district shall administer a program of education about HIV and AIDS for students, their families, and district employees to ensure that they are informed about the following:
 - a. The nature and effects of HIV, including current information about how it is transmitted and prevented in ways that are scientifically, legally, and educationally sound;
 - b. District policies and procedures relating to employees and students with diseases such as HIV or AIDS;
 - c. Resources within the district and elsewhere for obtaining additional information or assistance; and

- d. Procedures to prevent the spread of communicable diseases at school.

Evaluation of Infected Students and Staff:

- A. HIV is not transmitted casually. Accordingly, infection with HIV or AIDS is not, by itself, sufficient reason to remove a student or staff members from the school. When the superintendent has been notified that a student or staff member is infected with HIV or AIDS, the superintendent shall act appropriately to ensure the safety of persons in the school setting and to plan to support the infected person.
- B. When the district learns that a student is infected with HIV or AIDS, the appropriate procedures under state and federal law with regard to evaluation and educational programming shall be followed if the student is or may be educationally handicapped.
- C. When notified that an employee is infected with HIV or AIDS, the superintendent shall determine whether the infected person has a significant health problem that will restrict his/her ability to work and shall determine whether the infected person has a secondary infection that poses a medically recognized risk of transmission of the disease. The superintendent shall make this determination by consulting with the infected person and his/her physician.

The superintendent may also consult with public health officials and other persons, subject to the confidentiality provisions in this policy. The superintendent shall consider methods in which the district may anticipate and meet the needs of persons infected with HIV or AIDS.

Absent a secondary infection which creates a medically recognized risk of transmission of disease or a significant health problem that restricts the infected person's ability to work, the superintendent shall not alter the job assignment of the infected person. However, the superintendent shall periodically review the case with the persons identified above.

If the superintendent determines that a secondary infection poses a medically recognized risk of transmission of disease in the school setting or that a significant health problem restricts the infected person's ability to work, the superintendent shall consult with the persons identified above. After said consultation, the superintendent shall, if necessary, develop an individually tailored plan to accommodate the staff member, if possible. Additional persons may be consulted if necessary for gaining additional information, but the infected person must approve of the notification of any additional persons who are informed of the infected person's identity. The superintendent may consult with legal counsel to ensure that any official action is consistent with state and federal

JLCCA

law. If an individually tailored plan is necessary, said plan should be medically, legally, educationally, and ethically sound.

- D. Infected students who are aggrieved by the education plan determinations may appeal said determinations pursuant to state and federal special education law if the infected student is eligible for or claims that he/she is eligible for special education or special education and related services. Infected persons who do not claim that they are eligible for special education or special education and related services, but who are aggrieved by the superintendent's determination, may appeal said determinations to the Board.
- E. Confidentiality shall be observed throughout the foregoing process.

Confidentiality:

- A. The identify of a student or staff member who is infected with HIV or AIDS may be disclosed to those persons who determine whether the infected person has a secondary infection that poses a medically recognized risk of transmission of disease in the school setting or whether a significant health problem will restrict the infected person's ability to work or attend class. These persons include:
 - a. The superintendent or a person designated by the superintendent to be responsible for the determination, or, in the case of a student who is identified as educationally handicapped or who is claimed or believed to be educationally handicapped, the special services team.
 - b. The physician of the infected person.
 - c. Public health officials, to the extent that their knowledge of the infected person's identify is necessary.
- B. The persons listed above and the infected person, or his/her parents/guardians, shall determine whether additional persons may know the identity of an infected person. The identity of an infected person shall not be disclosed to persons who are not listed above without the consent of the infected person or the infected person's parents/guardians. The persons to whom the infected person's identity may be disclosed with the aforementioned consent include the school nurse, the dean of operations, or other persons necessary to protect the health of the infected person or to evaluate and monitor the case.
- C. All staff members who know the identity of persons infected with HIV or AIDS shall treat said information as confidential. No information will be divulged directly or indirectly to any individuals or groups, except as noted above. All medical information and written documentation of discussions, telephone

JLCCA

conversations, proceedings, and meetings concerning the HIV or AIDS infection shall be maintained in a locked file. Access to said file shall be granted only to those persons who have the written consent of the infected person or his/her parents/guardians. The names of infected persons shall not be used in documents, except when essential. No document containing the name or other information that reveals the identity of an infected person may be shared with any person for any purposes without the consent of the infected person or his/her parents/guardians. Any school staff member who violates the confidentiality provisions of this policy shall be subject to discipline. Test results and medical records shall be disclosed only with the consent of the infected person or his/her parents/guardians, pursuant to a subpoena or order of a court of administrative agency or otherwise in accordance with law.

Testing:

Mandatory testing for communicable diseases that are not spread by casual, everyday contact shall not be a condition for school entry or attendance, or for employment or continued employment.

Control of Infections:

- A. HIV cannot penetrate unbroken skin, and there is no evidence that HIV has been transmitted through contact with vomit, nasal discharge, saliva, urine, or feces. However, said body fluids commonly transmit infections such as hepatitis, colds, and flu. Accordingly, direct skin contact with body fluids should be avoided whenever possible.
- B. Staff members shall follow the universal precautions in handling body fluids in the schools.
- C. The district shall cooperate with local, state, and federal health agencies in controlling infections.
- D. If a person in a school setting has been exposed to blood-to-blood contact, the district should counsel the person to seek medical testing and attention.

Health Education:

The Board recognizes that HIV/AIDS education should be integrated into the health and family life curriculum, but may also be applied to other curriculum areas.

The district's HIV/AIDS education program must address, at a minimum, the nature, transmission, prevention, and effects of the disease. The program shall be provided in a

JLCCA

sequential manner, taking into consideration the age and maturity of the students and subject matter of the course.

Development of the program should take into account the instructional needs of all students in the district and be scientifically, legally, and educationally sound.

The superintendent shall ensure that the information presented as a part of the HIV/AIDS program is articulated in such a way that transition from grade to grade in the elementary school and from elementary to middle high school approaches to the material will be appropriate for all students.

The superintendent shall ensure that all staff involved in teaching the HIV/AIDS education program are properly certified and adequately prepared to teach the material. As necessary, appropriate staff training shall be provided. All employees shall have training in universal precautions.
